Application/Control Number: 10/085,304

Art Unit: 2829

1. The abstract of the disclosure is objected to because it has more than one paragraph.

Correction is required. See MPEP § 608.01(b).

2. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It is unclear from the specification how the value of R'_r is calculated in equations (2) and (3) on page 9,therefore it is unclear how the nominal rotor resistance R_r is evaluated.

Furthermore, it is unclear from the specification how the equation (2) is derived. Is this equation derived from equation (1).

3. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is unclear how the Ohmic stator resistance, the leakage inductances, the main inductance are interrelated and associated with each other. Furthermore, it is unclear how they are interrelated and associated with the amplitude & phase of the phase signal and the ohmic rotor resistance. In claim 2, it is unclear how the ohmic rotor resistance (R_r) is interrelated and associated with the actual ohmic rotor resistance (R_r).

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

Since claims are indefinite, no art has been applied to the instant claims. 4.

The prior art made of record and not relied upon is considered pertinent to applicant's 5.

disclosure.

Fulton et al (pat # 4,670,698) disclose adaptie induction motor controller.

Abbonddanti (Pat# 4,672,288) disclose torque controller for an AC motor drive and AC

motor drive embodying the same.

Lee (Pat # 5,998,958) discloses method for estimating resistance values of stator and

rotor of induction motor.

Kliman (Pat # 6,299,023) disclose system for removing spurious signatures in motor

current signature analysis.
